

FASTCRETE TH

فاست كريت تي إتش

Chloride free Admixture for Concrete, Cement mixtures for Fast Setting

Added Value:

Fast Crete TH is a water-based product, economic, easy to use and helps strengthen the concrete and cement mixtures faster than traditional way and it also helps after full dry and interaction with components of concrete and cement mixtures to prevent the appearance of the white material on the surface of bricks, tiles, and interlocks.

Economic and easy to apply

- Open addition from 0.5 – 3% to the weight of cement to obtain a fast setting and the required strength.
- Supplied in 5, 20,200, or 1000 Lit. packs
- **FastCrete TH** is added with the mixing water of concrete and cement mixtures or after mixing the cementitious mixtures with water.

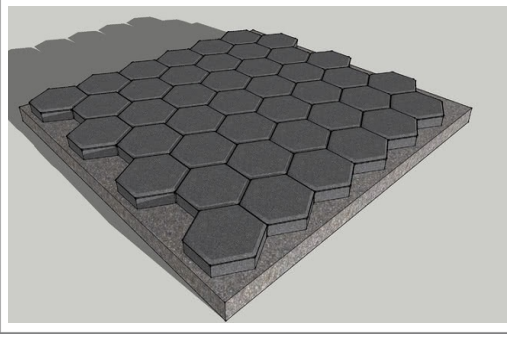

Specifications

- **FastCrete** is a viscous brown liquid, and doesn't contain any impurities.
- Density = 1.18 kg / liter.
- PH: 11-12.
- Doesn't contain any harmful or poisonous materials.
- Product validity is 1 year of production date.

FastCrete TH Features:

- Due to the fast developing of cementitious precast production machines and lines, the industry of tiles, bricks, interlocks, and precast cement products in general have been developed, but the setting time rate and developing cement mixtures strengths have still the same resulting in delays in production, and de-mould of forms.
- So **Fast Crete TH** provides a permanent solution to most of these problems since it increases the setting time and strengthens the concrete faster than the traditional one, and it also helps in obtaining early strengths faster than the ordinary one, especially in cold and winter climates.

Applications

- **FastCrete TH** is used in cold climates to obtain fast setting of concrete and cement mixtures.
- It is used in the bricks, tiles, and curbstones industry.
- To obtain fast setting of decorative tiles special mixtures and faster loading and transportation.
- For faster de-mould of Curbstones and special concrete unit forms.
- For faster production of Interlock units colored and gray.
- **FastCrete TH** can be used in plasters and ordinary cement mortars.
- For the production of lightweight cement blocks and faster setting, loading and transportation.
- **FastCrete FW** is a water-based material to preserve the environment and doesn't contain any harmful materials.

Components:

Each pack of **FastCrete TH** contains the latest technology of concrete and cement mixtures' fast setting and high strengths additives to obtain early strength for concrete and fast setting for cement mixtures in general in winter and cold climates for fast setting of Bricks, Curbstones, and interlocks special mixtures for faster loading and transportation safely faster than the traditional one.
