

PLASTER MAGIC

بلاستر ماجيك

A plaster additive converting traditional plaster mortar into professional mix

Adding Value

Plaster Magic is the product that provides a real solution of the problems of plaster from cracking, tingling, and difficulty of working the thickness of the plaster in one application. It also helps in leveling and smoothing the plaster surface and it can be added to the mortar which is used by spray machines for faster application and better appearance of the surface.

Economic and easy to apply

One packet for each cement bag, easily applied in the usual way, one bag of Plaster Magic produces about 250 kg Plaster is quite similar to the ready-made plaster, with a very low cost.

Specifications

- Soft powder with light creamy color.
- The bag weights 0.5 kg (500 g).
- Packed in sealed plastic bags.
- Does not contain any toxic or harmful substances.
- Product validity for two years provided the safety of the package.

Paster Magic; Product idea

For many years, the problems of the plaster have not found a real economic solution. The only solution now offered in the Egyptian market is the ready-made plaster mix packed in bags. But it costs a lot for any project or ordinary building. **Plaster Magic** can be added easily to the plaster mix (one bag for each cement bag) and added to sand as usual. The mix will be applied in the traditional way, and then the water is added with continues mixing until the mixture is fully homogeneous. **Plaster Magic** based mortar can be applied by a spray machine. (kindly refer to the Technical Department section for the assistance concerning the machine).

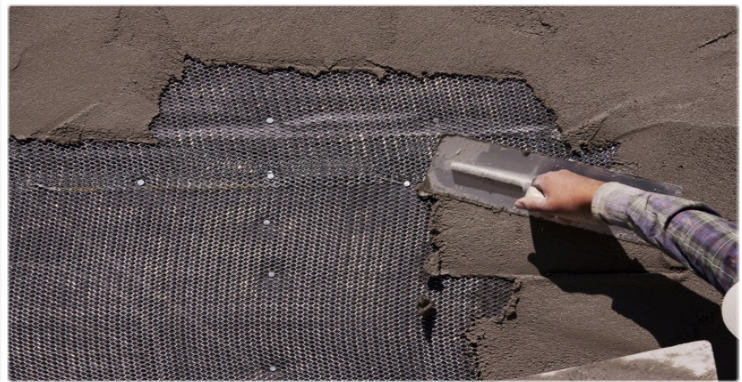

Application Fields

- Plaster additive for all kinds of plaster.
- Additive to the mortar to be applied for the spray plaster machine
- Can be mixed with **GBond LA** (one of our product) for better bonding to the different surfaces.
- Additive to the plaster mix for better bonding to the wire mesh.
- To improve smooth surface to the plaster
- It can help in reducing the cement content. and protecting our environment in addition.

Components:

- Each bag contains a mixture of the innovative additives to the cement mixture in the form of powder.
- It keeps water in the mixture of mortar or plaster for as long as possible when applied on the walls. It helps to obtain the highest mechanical properties of cement, and cement mixtures in general.
- Each bag also contains a material that helps to adhere the mortar to the different structural surfaces, especially the wire mesh, and soft surfaces.
- Each bag contains a substance that reduces the appearance of white powder on the surface of the plaster and mortar, which helps the cohesion of different paints after the application of mortar and plaster.
